

FTP Setup Note:

Instructor's Notes:

Filezilla can be downloaded for free at <http://filezilla-project.org/download.php?type=client> or our website under Vendors

Our host address is <ftp.inlandpacific.net>

Your username and password are sent to you in a separate email, be sure to use your full username when logging in (example: anyuser@inlandpacific.net)

The port number will always be 21 (this can be left blank at setup)

Tips:

Ziping large or multiple file with a zip program like WinZip will allow them to upload and download faster.

Other FTP programs like FireFTP and CuteFTP will work with our system but we do not support them.
